a Q²Solutions Company

Turning Hope
Into Help[™]

Your clinical trial sample tracking solution — enhanced

Labmatrix[®] 10 upgraded for improved performance and usability

Subject samples are the lifeblood of your clinical trials. To be successful, you need a unique solution that can track samples through their full lifecycles — across the ecosystem of sites, labs, biorepositories and other trial partners.

Labmatrix[®] can help. Labmatrix[®] Clinical Trial Sample and Consent Tracking (CTST) is an industry-leading solution developed by BioFortis, a Q² Solutions company, to address some of the biggest challenges related to clinical trial sample management.

Now you can accomplish even more with Labmatrix[®] 10. BioFortis has updated Labmatrix[®] to help you build on your team's success with new dashboard capabilities, improved performance, enhanced features and more.

Organize. Integrate. Discover.

Upgraded dashboard capabilities

- Build customizable dashboards with data-intensive visuals
- Share dashboards with your team
- Leverage Qiagram® queries as dashboard data sources
- Ensure users can only see their specific studies with access controls
- Export-import dashboards between environments

Improved performance

- Faster data loading
- Efficient handling of large audit logs
- More robust data indexing

Increased usability

- Bulk print barcodes for storage containers
- Bulk lock-unlock storage containers
- Cascading lists across forms

Enhanced Qiagram® features

- Swap nodes in queries
- Create a data source from any node in a query
- Query diagnostics
- Fuzzy match to enhance data harmonization

Integration

- .XPT file extension support for easier data import
- Microsoft® Azure message bus support for importing data
- User interface wizard to simplify single sign-on (SSO) setup
- Fuzzy matching functionality to reduce manual data reconciliation and improve data harmonization
- Pattern matching can sync incoming data to configured patterns to support data import flexibility

Delivering deeper and broader total sample management

Labmatrix® 10 builds on the industry-leading features you can count on.

- Clinical trial sample and consent tracking
- Near real-time reconciliation of eClinical data
- In-study and future-use sample consent
- Virtual biorepository

A single solution for your most complex sample tracking challenges

Labmatrix® takes the guesswork out of specimen management. It provides clear visibility into workflows, ensures sample usage corresponds with the subject consent, reduces operational and compliance risks, and offers a well-annotated subject and sample database to support research. Used in more than 1,000 trials, Labmatrix® offers sample-centric monitoring across a clinical trial's entire ecosystem.
